| <b>Full Stack Developer Intern   TabTrips</b>                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>April 2025 – Present</b> |
| <ul style="list-style-type: none"><li>Engineered frontend components and 10+ REST APIs using React.js, Node.js, and Tailwind CSS under the supervision of senior developers.</li><li>Developed the Dashboard module handling over 5 data visualization widgets, improving user experience and enabling 30% faster access to key metrics.</li><li>Integrated MongoDB collections storing more than 20,000 records, ensuring efficient retrieval and reducing query latency by 25%.</li></ul> |                             |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ResumeX – AI-Powered Resume Reviewer App (In Progress)</b>                                                                                                                                                                                                                                                                                                                                                                                |
| <ul style="list-style-type: none"><li>Building an AI-driven resume review tool offering smart suggestions, ATS checks, and job-fit optimization using Gemini API.</li><li>Tech stack: Next.js (frontend), Node.js + Express (backend), PostgreSQL (database), TypeScript, Zod, and Shadcn UI.</li><li>Supports PDF upload, AI-enhanced analysis, and personalized score generation with real-time feedback interface.</li></ul>              |
| <b>True Feedback – Anonymous Feedback Platform</b>                                                                                                                                                                                                                                                                                                                                                                                           |
| <ul style="list-style-type: none"><li>Developing an anonymous feedback platform expected to handle 500+ submissions per day with optional AI-generated suggestions via ChatGPT and Gemini APIs.</li><li>Developed the platform using Next.js, TypeScript, and Zod validation, supporting real-time updates for 100+ concurrent users.</li><li>Implemented secure user flows and automated moderation for 95% of incoming feedback.</li></ul> |
| <b>MediStore – Pharmacy E-Commerce Platform</b>                                                                                                                                                                                                                                                                                                                                                                                              |
| <ul style="list-style-type: none"><li>Developed a complete pharmacy e-commerce solution with product search, filtering, cart, admin panel, and secure order handling.</li><li>Integrated Cloudinary for media storage, PayPal for payments, and implemented JWT-based user authentication.</li><li>Used React, Node.js, Express, MongoDB, and Tailwind CSS to deliver a responsive and scalable system.</li></ul>                            |

## TECHNICAL SKILLS

**Languages/Frameworks:** JavaScript, TypeScript, Java, HTML5, CSS3, React.js, Next.js, Redux Toolkit, Node.js, Express.js, Tailwind CSS, Bootstrap  
**Databases:** MongoDB, MySQL, PostgreSQL, Prisma ORM (basic)  
**Tools:** Git, GitHub, Mongoose, Zod Validation, n8n (exploring)  
**Concepts:** Data Structures and Algorithms, REST APIs, AI Integration, Automation via No-Code Platforms

## ACHIEVEMENTS

- Solved 100+ DSA problems across platforms including LeetCode and CodeStudio.
- MERN Stack Developer Certificate – Infosys Springboard
- Java Certification – IIT Kharagpur via NPTEL
- Coordinated college annual fest "Manifest" for various technical events.
